Get a copy of QST, then flip through the pages and request a catalog
from anyone who offers kits. There are lots of excellent sources.
Many of the best don't have 800 numbers or have unusual hours (being
perhaps as much a labor of love as a business) so don't pass those by.

Also read here and on the QRP list for people's opinions about various
kits. To pick my last kit, I figured out who the experts are on these
lists, then paid attention to what kits those experts liked.

The ARRL publishes many books with plans for radios and antennas. See
the "ARRL Bookshelf" section in that copy of QST I mentioned. :-) For
antennas, they have the Antenna Handbook, several Antenna Compendiums,
and more theoretical books like Reflections. For radios, see
Solid-State Design for the Radio Amateur, W1FB's Notebooks, and
QRP Classics.

For good background info on all aspects of ham radio, buy the ARRL
Handbook. It certainly won't replace the other books, but it will give
you a solid foundation.

Your local ham dealer probably stocks many of these, or you can mail-
order them from the ARRL or a dealer like Tucker Electronics or the Ham
Radio Bookstore.
